

Take the bus, help protect the air we breathe!

In Sydney, motor vehicle emissions is the main source of air pollutants. If you drive your car an average of 50 kilometers a day, you contribute up to 3.8 tonnes* of greenhouse gases and particulates every year. This pollutes the air we breathe and is a major cause of respiratory health problems.

You can help reduce air pollution by taking the bus instead of your car on your next trip to work, to shop or to visit relatives and friends. Each bus can keep up to 50 cars off the road for each trip. Imagine the reduction in pollution, noise, traffic and road congestion that this could make.

Take the bus for a better environment for you and your family.

* Greenhouse emission figure based on information from the Australian Greenhouse Office, 'Global Warming Cool It' July 2000. October 2004. STA Marketing.
